Design and Construction Notes

1.0 For continuous concrete grade beam footing, pipe bollards shall be spaced 4’-0” O.C. maximum.

2.0 Allowable Foundation Pressure = 2,000 psf. Allowable Lateral Bearing = 150/psf. Assumed in-place soil, Sand, Silty Sand, Clayey Sand, Silty Gravel, or Clayey Gravel. For higher soil allowable design values, site soil investigation by a Registered Geotechnical Engineer is required.

3.0 See supplemental concrete footing details for additional information.

4.0 Material Specifications: Concrete = 3,000 psi (28-day min); Reinforcing ASTM A615 (60 ksi for all bars #5 and larger, 40 ksi for all bars #4 and smaller).
Engineered Anchorage System for the MaxiForce™ Universal Base Circular Concrete Pier Footing

1. MaxiForce™ Steel pipe bollard per specification.
3. Finished grade or pavement.
4. Concrete base pier per schedule, at each pipe sleeve.
5. 3/4" Dia. PVC pipe as needed for drainage below pipe sleeve.
6. Compacted gravel bed (3" minimum).
7. #3 hoop ties at 12" O.C. and 2 - #3 ties at top and bottom of concrete pier.
8. Centerline of base and concrete base pier.

Engineered Anchorage System for the MaxiForce™ Universal Base Continuous Beam Footing

1. MaxiForce™ Steel pipe bollard per specification.
3. Finished grade or pavement.
4. Continuous concrete grade beam per schedule.
5. 3/4" Dia. PVC pipe as needed for drainage below pipe sleeve.
6. Compacted gravel bed (3" minimum).
7. #4 at 12" O.C. - TYP. with 4" min. hooks with 135 degree bend - TYP. UNO.
8. Centerline of base and concrete grade beam.
9. Continuous longitudinal reinforcement per schedule - lap splice 24" min. - TYP. UNO.
